Global X Covered Call ETFs – Key Takeaways

Takeaway 1 – April was Characterized by a Strong Uptrend in U.S. Equity Prices

Investors continued to pay close attention to the geopolitical landscape during the most recent monthly roll period. U.S. equities rallied after a two-week ceasefire agreement was reached between the United States and Iran on April 7. From there through the end of the roll period, the Nasdaq-100® and S&P 500® advanced 10.21% and 7.73%, respectively. The rally was given an additional lift on the last day of the roll period, when Iran announced the reopening of the Strait of Hormuz, only for it to be closed again shortly thereafter.

Takeaway 2 – The Rally Couldn't Derail QYLD and XYLD's Solid Longer-Term Relative Performance

QYLD and XYLD entered the roll period with elevated premiums of 2.91% and 2.60%, but over its duration they trailed the 11.65% and 9.60% total returns of the Nasdaq-100® and S&P 500®. This is an expected outcome given their fully covered structure. That said, the markets haven't experienced such material monthly returns over the course of any roll period for the Covered Call suite since April 17 - May 16 of 2025, when they were clawing back off the lows that they had established post Liberation Day. In the recent, more moderate growth environment that dates from the September 19, 2025 roll date thru April 17, 2026, QYLD and XYLD have outpaced their benchmarks by 2.34% and 0.18%, respectively – reinforcing their historical status as consistent distribution providers and potential outperformers even in upward trending markets.

Takeaway 3 – A Top for Oil Prices Would Interestingly Position MLPD

MLPD's 100% covered call overlay on MLPX seeks to leverage the inherent volatility that exists for its reference asset and produce a monthly distribution stream. In periods where oil prices are flat or declining – negatively influencing upside for MLPX – the strategy can help offset weaker price returns through potential income and reduced volatility relative to an uncovered position. This backdrop may be emerging following WTI crude's pullback from a three-year high in early April. At the end of Q1 2026, trailing 12-month distributions for MLPD stood at 13.58%.

Past performance is not a guarantee of future results. All fund return data is based on fund net asset value. The trailing 12-month distribution is estimated to include a return of capital. For information on the breakdown of the distributions, please see MLPD's most recent [19a Notice](#). These do not imply rates for any future distributions.

Global X Covered Call ETFs – Premiums & Distributions

The Global X S&P 500® Covered Call ETF (XYLD) and the Global X Nasdaq 100® Covered Call ETF (QYLD) received premiums of **1.75%** and **2.18%** in the April roll period, respectively, and distributed 0.88% and 1.01% of their NAV, respectively.

Trailing 12-Month Premium & Distribution Data				
Date	XYLD		QYLD	
	Premium	Distribution	Premium	Distribution
May-25	2.07%	1.02%	2.56%	1.01%
Jun-25	2.00%	1.00%	2.40%	1.00%
Jul-25	1.60%	0.81%	1.97%	0.99%
Aug-25	1.62%	0.82%	1.99%	1.00%
Sep-25	1.54%	0.77%	1.99%	1.00%
Oct-25	2.62%	1.00%	3.38%	1.00%
Nov-25	2.94%	1.00%	3.86%	1.00%
Dec-25	1.59%	0.80%	2.14%	1.01%
Jan-26	1.75%	0.88%	2.32%	1.00%
Feb-26	1.66%	0.84%	2.21%	1.02%
Mar-26	2.60%	1.00%	2.91%	1.00%
Apr-26	1.75%	0.88%	2.18%	1.01%

As a general guideline, the monthly distributions of XYLD and QYLD are approximately capped at the lower of a) half of premiums received or b) 1% of net asset value (NAV). The excess amount of option premiums received, if applicable, is reinvested into the fund. Year-end distributions can exceed the general guideline due to capital gains that are paid out at the end of the year. Past performance is not a guarantee of future results. Future distributions are not guaranteed. For a full history of fund premiums and distributions, please visit [our site](#). For performance data current to the most recent month- or quarter-end or a copy of the fund prospectus please visit [XYLD](#) and [QYLD](#) fund pages.

Global X Covered Call ETFs – Premiums & Distributions

The Global X Russell 2000 Covered Call ETF (RYLD) and the Global X Dow 30® Covered Call ETF (DJIA) received premiums of **2.54%** and **1.22%** in the April roll period, respectively, and distributed 1.02% and 0.61% of their NAV, respectively.

Trailing 12-Month Premium & Distribution Data				
Date	RYLD		DJIA	
	Premium	Distribution	Premium	Distribution

Tracking Index: An Index tracked by the funds.; 4. Equity Index: An Index used to measure the market value of a certain group of shares or stocks.

Global X Covered Call & Growth ETFs – Key Takeaways

Takeaway 1 – Partial Coverage Helped Navigate Early Weakness and the Subsequent Rally

Although the broader trajectory of U.S. equities was positive during the period, the first six business days saw the Nasdaq-100® and S&P 500® decline -3.94% and -2.49%, respectively. Premiums collected by QYLG and XYLG provided partial downside buffers, with the funds declining -3.03% and -1.79% over that stretch. As markets rebounded, however, their partially covered structure allowed for a degree of upside participation. Taking in premiums of 1.41% and 1.29% at the start of the roll period, QYLG and XYLG delivered total returns of 8.40% and 6.80%, respectively, while the Nasdaq-100® and S&P 500® returned 11.65% and 9.60%.

Takeaway 2 – A Longer-Winded Crypto Rally Also Gained New Legs

Following a near-50% decline for bitcoin from October 6, 2025 to February 5, 2026, both bitcoin and ether moved higher. From that February 5 low through April 17, the Coin Metrics' CMBI Bitcoin Index rallied 21.80%, while the Coin Metrics' CMBI Ethereum Index rose 30.38%. Elevated volatility supported premium generation, with BCCC collecting an average weekly premium of 1.41% since its February 6 roll date. In conjunction with its partially covered structure, this allowed the fund to advance materially during the term, delivering a total return 21.40%.

Takeaway 3 – Equity Volatility May Remain Evident in the Near Term

Acting as the proverbial fear gauge of the domestic equity markets, the Cboe Volatility Index (VIX) reached one of its highest levels in over a year on March 27 before moderating. Although volatility has since declined, geopolitical developments, inflation uncertainty, and the ongoing conflict in the Middle East continue to drive market swings. For the Covered Call & Growth suite, these conditions remain relevant, as changes in volatility directly impact premium levels and potential income generation.

Past performance is not a guarantee of future results. High short-term performance may not be repeatable. All fund return data is based on fund net asset value.

Global X Covered Call & Growth ETFs – Premiums & Distributions

The Global X S&P 500® Covered Call & Growth ETF (XYLG) and the Global X Nasdaq 100® Covered Call & Growth ETF (QYLG) received premiums of **0.85%** and **1.08%** in the April roll period, and distributed 0.43% and 0.55% of their NAV, respectively.

Trailing 12-Month Premium & Distribution Data				
Date	XYLG		QYLG	
	Premium	Distribution	Premium	Distribution
May-25	1.02%	0.52%	1.24%	0.66%
Jun-25	0.98%	0.49%	1.18%	0.59%
Jul-25	0.79%	0.40%	0.97%	0.48%
Aug-25	0.80%	0.40%	0.95%	0.48%
Sep-25	0.76%	0.38%	0.95%	0.49%
Oct-25	1.28%	0.64%	1.62%	0.81%
Nov-25	1.44%	0.73%	1.88%	0.94%
Dec-25	0.78%	8.09%	1.06%	10.57%
Jan-26	0.86%	0.44%	1.13%	0.57%
Feb-26	0.82%	0.42%	1.07%	0.55%
Mar-26	1.29%	0.64%	1.41%	0.70%
Apr-26	0.85%	0.43%	1.08%	0.55%

As a general guideline, the monthly distributions of QYLG and XYLG are approximately capped at the lower of a) half of premiums received or b) 1% of net asset value (NAV). The excess amount of option premiums received, if applicable, is reinvested into the fund. Year-end distributions can exceed the general guideline due to capital gains that are paid out at the end of the year. Past performance is not a guarantee of future results. Future distributions are not guaranteed. For a full history of fund premiums and distributions, please visit [our site](#). For performance data current to the most recent month- or quarter-end or a copy of the fund prospectus please visit [QYLG](#) and [XYLG](#) fund pages.

Global X Covered Call & Growth ETFs – Premiums & Distributions

The Global X Russell 2000 Covered Call & Growth ETF (RYLG) and the Global X Dow 30® Covered Call & Growth ETF (DYLG) received premiums of **1.24%** and **0.61%** in the April roll period, and distributed 0.62% and 0.30% of their NAV, respectively.

Trailing 12-Month Premium & Distribution Data				
Date	RYLG		DYLG	
	Premium	Distribution	Premium	Distribution

Global X Income EdgeSM ETFs Overview – ~25% Covered Strategies¹

Global X's Income EdgeSM strategies actively manage call option exposure rather than maintaining a fixed coverage percentage, allowing for positioning adjustments as market conditions evolve in an effort to target annualized distribution rates.

	EDGX	EDGQ
	US 500 Income Edge SM ETF	Nasdaq-100 [®] Income Edge SM ETF
Primary Goals	Current Income and Growth	Current Income and Growth
Distribution Frequency	Weekly	Weekly
Net Expense Ratio	0.00% ² / 0.50% ³	0.00% ² / 0.53% ³
Tracking Index³	N/A	N/A
Equity Index⁴/Long Exposure	Solactive GBS United States 500 Index	Nasdaq-100 [®] Index
Options Moneyness	At- or Near-the-money ¹	At- or Near-the-money ¹
Portfolio Coverage Ratio	~25% ¹	~25% ¹
Options Strategy	Buys the stocks in the equity index and/or an ETF that roughly tracks the equity index and writes corresponding call options to pursue 9% annualized distribution rate.	Buys the stocks in the equity index and/or an ETF that roughly tracks the equity index and writes corresponding call options to pursue 13% annualized distribution rate.

1. Moneyness and degree of notional coverage may vary. We expect the funds' coverage ratio to average approximately 25% over the long term, though actual coverage may fluctuate meaningfully from week to week and is not fixed, targeted, or guaranteed.; 2. Net Expense Ratio: Reflects fees incurred by the Fund after waivers and reimbursements – fee waivers are contractual and in effect until at least March 1, 2027.; 3. Gross Expense Ratio: Reflects fees incurred by the Fund before waivers and reimbursements, including but not limited to management fees, 12b-1 fees, and acquired fund fees and expenses.; 4. Tracking Index: An Index tracked by the funds.

Global X Income EdgeSM ETFs – Key Takeaways

Takeaway 1 – Global X’s Income EdgeSM ETFs Captured a Great Deal of the Recent Equity Rally

During the period, the S&P 500® and Nasdaq-100® gained 11.95% and 15.33%, on a total return basis. EDGX and EDGQ, meanwhile, returned 10.67% and 12.77%, supported by four weekly call premiums averaging 0.15% and 0.24%, respectively. The funds also remained largely uncapped to the upside, with EDGX and EDGQ’s uncovered notional exposure hovering around 72.81% and 66.22%, on average.

Takeaway 2 – Elevated Volatility Enabled Lower Coverage and Greater Upside Participation

The Global X Income EdgeSM ETFs seek to generate and distribute option premiums that are in line with targeted distribution rates. This allows covered call coverage ratios associated with the funds to oscillate. Recently elevated volatility reduced the amount of notional that needed to be covered to pursue said targeted distributions. From March 20 to April 10, when equity markets were more volatile and trending lower, EDGX and EDGQ’s coverage ratios averaged at approximately 27% and 34%, respectively. As markets rebounded, both funds remained positioned to participate in the upside. Distribution rates continued in the ~9% and ~13% ranges, respectively.

Takeaway 3 – Rate Volatility and Inflation Uncertainty Support the Case for Equity Income

At the start of 2026, expectations for rate cuts by the Federal Reserve (Fed) were underpinned by moderating inflation, which was holding steady at or below the 3.0% level, and a slowing labor market. That shifted in March as rising oil prices pushed the headline Consumer Price Index (CPI) higher, reducing expectations for near-term policy easing. In this environment, where fixed income returns may rely more on income than price appreciation, equity income strategies like the Global X Income EdgeSM series remain relevant, offering distribution potential alongside perpetual market exposure.

Past performance is not a guarantee of future results. All fund return data is based on fund net asset value. Distribution rates do not imply rates for any future distributions.

Glossary

Term	Description	Term	Description
Call Option	An option that gives the holder the right to buy an underlying asset from another party at a fixed price over a specific period of time.	Strike Price	The fixed price at which an option holder can buy or sell the underlying asset. Also called 'exercise price'.
Implied Volatility	The market's expectation of how much an underlying asset's price will fluctuate in the future, typically derived from the pricing of options contracts on that same asset.	Moneyness	A measure of intrinsic value of an option, that is, it will tell the option holder whether exercising the option will be profitable.
Long Call	A position in a call option contract in which one has the exercisable right under the contract. This position reflects a bullish attitude.	At-the-Money	An option in which the underlying's price equals the strike price.
Short Call	A position in a call option contract one has in which the right under the contract can be exercised against oneself. This reflects bearish attitude.	In-the-Money	Options that, if exercised, would result in the value received being worth more than the payment required to exercise.
Cboe DJIA Volatility Index	Measures the market's expectation of 30-day volatility implicit in the prices of near-term Dow Jones Industrial Average Options.	Out-of-the-Money	Options that, if exercised, would require the payment of more money than the value received and therefore would not be currently exercised.
Cboe Nasdaq-100 Volatility Index	Measures the market's expectation of 30-day volatility implicit in the prices of near-term Nasdaq-100 Options.	Duration	Measure of bond price sensitivity to interest rate changes measured in years based on time until maturity.
Market Price	The current price of the underlying asset of the option contract, such as a stock.	Cboe Equity Put/Call Ratio	Measures the ratio between the volume of all equity put options and all equity call options being traded on a daily basis.

Glossary (Continued)

Term	Description	Term	Description
Covered Call	An option strategy involving the holding of an asset and sale of a call option on the same asset.	Distribution Rate	The annual rate an investor would receive if the most recent fund distribution remained the same going forward. The rate represents a single distribution from the fund and does not represent total return of the fund. The distribution rate is calculated by annualizing the most recent distribution and dividing by the most recent fund NAV.
Cboe Russell 2000 Volatility Index	Measures the market's expectation of 30-day volatility implicit in the prices of near-term Russell 2000 Options.		
Cboe Volatility Index	Commonly referred to as VIX, reflects a market estimate of future volatility of the U.S. stock market, based on the weighted average of the implied volatilities of the S&P 500.		
Trailing 12 Month Distributions	The distribution, as a percentage, an investor would have received if they had held the fund over the last twelve months, assuming the most recent NAV. The 12-Trailing Month distribution is calculated by summing any income, capital gains, and return of capital distributions over the past twelve months and dividing by the sum of the most recent NAV and any capital gain distributions made over the same time period.		
Premium	The amount of money a buyer pays and seller receives to engage in an option transaction.		
STRIPS	Separate Trading of Registered Interest and Principal of Securities		

Important Information

Important Information

Investing involves risk, including the possible loss of principal. Concentration in a particular industry or sector will subject the Funds to loss due to adverse occurrences that may affect that industry or sector. Investors should be willing to accept a high degree of volatility in the price of the fund's shares and the possibility of significant losses.

The Funds engage in options trading. An option is a contract sold by one party to another that gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed upon price within a certain period or on a specific date. A covered call option involves holding a long position in a particular asset and writing a call option on that same asset with the goal of realizing additional income from the option premium. By selling covered call options, the funds limit their opportunity to profit from an increase in the price of the underlying asset above the exercise price, but continues to bear the risk of a decline in the asset. A liquid market may not exist for options held by the fund. While the fund receives premiums for writing the call options, the price it realizes from the exercise of an option could be substantially below the asset's current market price.

Investments in securities of MLPs involve risk that differ from investments in common stock including risks related to limited control and limited rights to vote on matters affecting the MLP. MLP common units and other equity securities can be affected by macro-economic and other factors affecting the stock market in general, expectations of interest rates, investor sentiment towards MLPs or the energy sector, changes in a particular issuer's financial condition, or unfavorable or unanticipated poor performance of a particular issuer (in the case of MLPs, generally measured in terms of distributable cash flow). MLPD invests in the energy industry, which entails significant risk and volatility. Small and mid-capitalization companies may pose greater risks than large companies. The MLPD also expects to pay distributions, which will be treated as a return of capital for tax purposes rather than from net profits and shareholders should not assume that the source of distributions is from the net profits of the Fund.

Neither MLPD nor the Adviser has control over the actions of underlying MLPs. The amount of cash that each individual MLP can distribute to its partners will depend on the amount of cash it generates from operations, which will vary from quarter to quarter depending on factors affecting the energy infrastructure market generally. Available cash will also depend on the MLPs' level of operating costs (including incentive distributions to the general partner), level of capital expenditures, debt service requirements, acquisition costs (if any), fluctuations in working capital needs, and other factors. The MLP holdings of the underlying fund expect to generate significant investment income, and the underlying fund's investments may not distribute the expected or anticipated levels of cash, resulting in the risk that the fund may not have the ability to make cash distributions as investors expect from MLP-focused investments.

BCCC and EHCC may not be suitable for all investors.

Bitcoin, bitcoin futures, ether and ether futures are relatively new asset class. They are subject to unique and substantial risks, and historically, have been subject to significant price volatility. The value of an investment in the Fund could decline significantly and without warning, including to zero. You should be prepared to lose your entire investment.

Important Information (Continued)

BCCC and EHCC are actively managed and invest in options contracts on one or more exchange-traded products (ETP) that invest principally in futures contracts on or invest directly in bitcoin or ether, respectively. The Funds do not invest directly in or hold cryptocurrencies. The price and performance of futures should be expected to differ from the current “spot” price of the asset. These differences could be significant. Futures are subject to margin requirements, collateral requirements and other limits that may prevent the ETF from achieving its objective. Margin requirements for futures and costs associated with rolling (buying and selling) futures may have a negative impact on the fund's performance and its ability to achieve its investment objective.

Cryptocurrency is largely unregulated and investments may be more susceptible to fraud and manipulation than more regulated investments. Cryptocurrencies and cryptocurrency futures are subject to rapid price swings, including as a result of actions and statements by influencers and the media, changes in the supply of and demand for the cryptocurrency and its futures contracts and other factors.

Fixed income securities are subject to loss of principal during periods of rising interest rates. An investment in the fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

There is no assurance EDGQ or EDGX will achieve its target annualized distribution rates. The actual distributions the Fund makes over a one-year period may deviate from its intended target annualized distribution rate.

QYLD, DJIA, MLPD, QYLG, DYLG, BCCC, EHCC, TLTX, EDGX, EDGQ, and TYLG are non-diversified.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Beginning October 15, 2020, market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer (“NBBO”) as of the time the ETF calculates current NAV per share. Prior to October 15, 2020, market price returns were based on the midpoint between the Bid and Ask price. NAVs are calculated using prices as of 4:00 PM Eastern Time. The returns shown do not represent the returns you would receive if you traded shares at other times. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.
